Notes

This table records the sidereal time corresponding to 0h Local Standard Time on your meridian. You can use this to find the approximate transit time of a star of given RA, and estimate what stars will be favourably placed for observation at any given time of day.

Semi-diurnal arc table

Semi-diurnal arc in hours and minutes of time by latitude of observer and declination of star

		Latitude											
		25.0	30.0	35.0	37.5	40.0	45.0	50.0	51.5	52.5	55.0	57.5	60.0

65	12:00												

Notes

This table shows half the time that a star stays *above* the horizon when the declination and latitude are of the same name; and *below* the horizon if the declination and latitude have contrary names.

Amplitude

Degrees from due East for rising

		Latitude
