## Data sets

I've given the source of each data set (not in Harvard style!). All except Set 8 are real published data. Set 8 is a simulation based on real historical means and standard deviations.

## Set 1: Blood pressure baselines

The table below provides base line measurements of the supine systolic blood pressure (S) and supine diastolic blood pressure (D) for 19 diabetic patients. This data was collected before the patients took part in a drug trial.

| ID | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| S | 124 | 120 | 115 | 134 | 131 | 119 | 124 | 127 | 113 | 132 | 129 | 124 | 112 | 124 | 144 | 134 | 119 | 123 | 122 |
| D | 78 | 70 | 68 | 91 | 93 | 71 | 76 | 82 | 72 | 88 | 73 | 76 | 70 | 80 | 88 | 80 | 77 | 58 | 79 |

Part way through the trial, the same 19 patients had their blood pressures re-measured after all traces of the drug had left their system. This formed a second base line measurement.

| ID | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| S | 120 | 138 | 111 | 123 | 111 | 113 | 108 | 121 | 107 | 122 | 139 | 127 | 112 | 128 | 156 | 122 | 115 | 114 | 124 |
| D | 68 | 70 | 71 | 83 | 72 | 64 | 76 | 65 | 57 | 78 | 80 | 65 | 72 | 83 | 99 | 81 | 68 | 61 | 76 |

## Set 2: Giant Redwood Trees

Ecologists keep records on the largest Redwood trees in North American forests. Below is a random sample of 100 Breast Height Diameters from a census of large Redwoods. The measurements are in centimetres.

| 357 | 421 | 381 | 302 | 411 | 405 | 421 | 332 | 518 | 266 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | :--- | :--- | :--- |
| 390 | 427 | 399 | 329 | 384 | 381 | 487 | 411 | 381 | 402 |
| 329 | 290 | 268 | 366 | 317 | 287 | 411 | 454 | 524 | 293 |
| 351 | 296 | 484 | 329 | 402 | 256 | 456 | 381 | 393 | 414 |
| 338 | 561 | 396 | 402 | 290 | 451 | 456 | 411 | 271 | 402 |
| 293 | 484 | 381 | 335 | 347 | 338 | 381 | 366 | 472 | 321 |

## Set 3: Stroop Effect

"Participants were invited to sit at a desk in a quiet, well illuminated room and were asked to read a set of instructions. They were asked if they fully understood these and a practice list of 24 words was then placed, face down, on the table in front of them. This list was prepared using words from both the test sheets. When ready, the participants turned the paper over and proceeded to name the colours of the ink for each word in order. A timer was used to measure their performance, and a record was kept of the accuracy of their replies. They were given 30 seconds rest before the main test. This consisted of the first list, followed by a 30 second rest, followed by the second list, all in the same manner as before. The order of presentation of the lists was randomised"

The table below has the time taken in seconds to read all of the 24 cards with neutral words $(\mathrm{N})$ and the time taken to read the 24 cards with colour words (C) for each of the 16 subjects. I've missed out the data on errors, but that can be found in the source.

| ID | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| N | 14 | 18 | 13 | 17 | 16 | 15 | 25 | 21 | 16 | 18 | 16 | 19 | 22 | 25 | 16 | 19 |
| C | 17 | 23 | 16 | 21 | 29 | 19 | 34 | 24 | 20 | 21 | 22 | 22 | 27 | 28 | 18 | 26 |

## Set 4: Heights of 100 pregnant women

Below is a randomly chosen sample of the heights in centimetres of 100 pregnant women. The sample was drawn from a list of 1794 heights compiled as part of a larger survey by Janet Peacock and used in the textbook An Introduction to Medical Statistics by M Bland. This is real data and the heights were measured in metric units directly under normal hospital conditions.

| 159 | 173 | 164 | 158 | 163 | 162 | 163 | 156 | 160 | 175 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 161 | 155 | 157 | 152 | 166 | 165 | 167 | 162 | 158 | 169 |
| 151 | 156 | 158 | 158 | 171 | 156 | 163 | 160 | 159 | 177 |
| 159 | 159 | 161 | 165 | 157 | 165 | 161 | 157 | 168 | 170 |
| 156 | 161 | 178 | 168 | 156 | 163 | 168 | 165 | 160 | 164 |
| 154 | 168 | 161 | 161 | 162 | 165 | 167 | 153 | 157 | 163 |
| 150 | 164 | 168 | 153 | 167 | 158 | 158 | 160 | 154 | 160 |
| 161 | 163 | 163 | 164 | 163 | 157 | 165 | 167 | 155 | 165 |
| 160 | 156 | 170 | 161 | 150 | 156 | 160 | 152 | 147 | 177 |
| 163 | 162 | 163 | 167 | 163 | 162 | 155 | 159 | 170 | 160 |

## Set 5: Frequency distribution of heights of 1794 pregnant women

This frequency distribution was compiled from the full data set of Janet Peacock's quoted in Set 4 above.

| Height interval | Midpoint | Frequency | fx | Cumulative <br> frequency |
| :--- | :--- | :--- | :--- | :--- |
| $135 \leq \mathrm{h}<140$ |  | 0 |  |  |
| $140 \leq \mathrm{h}<145$ |  | 2 |  |  |
| $145 \leq \mathrm{h}<150$ |  | 42 |  |  |
| $150 \leq \mathrm{h}<155$ |  | 183 |  |  |
| $155 \leq \mathrm{h}<160$ |  | 455 |  |  |
| $160 \leq \mathrm{h}<165$ |  | 579 |  |  |
| $165 \leq \mathrm{h}<170$ |  | 346 |  |  |
| $170 \leq \mathrm{h}<175$ |  | 144 |  |  |
| $175 \leq \mathrm{h}<180$ |  | 40 |  |  |
| $180 \leq \mathrm{h}<185$ |  | 3 |  |  |
| $185 \leq \mathrm{h}<190$ |  | 0 |  |  |

## Set 6: Height and Peak Expiratory Flow Rate (PEFR) for female medical students

The height ( H in cm ) and PEFR (litres $/ \mathrm{min}$ ) for 15 female medical students has been taken from a larger data set and reformatted into the table below...

| ID | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| H | 181 | 168 | 163 | 171 | 177 | 169 | 161 | 170 | 158 | 161 | 163 | 155 | 171 | 172 | 168 |
| PEFR | 522 | 440 | 428 | 537 | 513 | 510 | 383 | 455 | 440 | 461 | 370 | 503 | 430 | 442 | 595 |

Source: http://www-users.york.ac.uk/~mb55/datasets/datasets.htm\#intro
Accessed: $6^{\text {th }}$ Feb 2010

## Set 7: Age of Mothers of Patients with Down's Syndrome for Births in Australia from 1942 to 1952

| Age interval of mother | Frequency of births | Frequency of Down's |
| :--- | :---: | :---: |
| Less than 20 years | 35555 | 15 |
| 20 to 24 years | 207931 | 128 |
| 25 to 29 years | 253450 | 208 |
| 30 to 34 years | 170970 | 194 |
| 35 to 39 years | 86046 | 297 |
| 40 to 44 years | 24498 | 240 |
| 45 or over | 1707 | 37 |

## Set 9: Heights of Dutch army recruits: changes over time

Below are the estimated median heights $(\mathrm{H})$ for conscripts to the Dutch army each decade for a period spanning 120 years. Heights are in millimetres.

| Year | 1820 | 1830 | 1840 | 1850 | 1860 | 1870 | 1880 | 1890 | 1900 | 1910 | 1920 | 1930 | 1940 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| H | 1647 | 1665 | 1653 | 1642 | 1640 | 1648 | 1657 | 1668 | 1678 | 1688 | 1699 | 1720 | 1734 |

Source: Based on a time series of median heights in Paradoxes of Modernization and Material Well-Being in the Netherlands during the Nineteenth Century, Drukker and Tassenaar, Chapter 9 of Health and Welfare during Industrialization, edited by Steckel and Floud, University of Chicago Press, 1997, table 9A.2, no pagination.

## Set 10: Height at Forced expiratory volume in 1 second (FEV1) for 20 medical students

The table below contains the heights ( cm ) and Forced expiratory volume in 1 second (FEV1) (litres) for 20 male medical students.

| Height (cm) | FEV1 (li) |
| :--- | :--- |
| 174.0 | 4.32 |
| 180.7 | 4.80 |
| 183.7 | 4.68 |
| 177.0 | 5.43 |
| 177.0 | 3.09 |
| 172.0 | 3.78 |
| 176.0 | 3.75 |
| 177.0 | 4.05 |
| 164.0 | 3.54 |
| 178.0 | 2.98 |
| 167.0 | 3.54 |
| 171.2 | 3.42 |
| 177.4 | 3.60 |
| 171.3 | 3.20 |
| 183.6 | 4.56 |
| 183.1 | 4.78 |
| 172.0 | 3.60 |
| 181.0 | 3.96 |
| 170.4 | 3.19 |
| 171.2 | 2.85 |
